PUBLIC HEALTH SERVICE AND RESEARCH

- 1975 Rutgers University, I conducted a one year research thesis developing a practical and efficient diagnostic method for the mass screening of lead levels in children. The children's saliva was analyzed for lead content using stimulated mixed salivary fluid. The values were determined using atomic spectroscopy and then were compared to blood samples taken simultaneously.
- 1977 Public Health Service, Externship
National Caries Program
National Institute of Health
Bethesda, Maryland
Participated in a research project at the National Caries Program with Dr. Paul Keyes. A major objective of this program is to develop a vaccine against dental caries.

PUBLIC HEALTH SERVICE AND RESEARCH (continued)

We also developed a quantitatively reproducible radioactive assay for determining the adherence and coherence under various conditions, using Streptococcus Mutans.

1978 Public Health Services, Externship
Assignment: Alaska Native Medical Health Center
 Anchorage, Alaska

Rotations were in various departments within the hospital: pedodontics, periodontics, endodontics, prosthetics, oral surgery, ophthalmology, hematology, ENT, orthopedics, anesthesiology, general surgery, emergency room, radiology and obstetrics. I scrubbed and assisted in more than twenty general surgery cases, including tympanoplasties and mastoidectomies, hysterectomies, caesarian sections, burn victims, laminectomies, amputations, debridement and bronchoscopy. Assisted and performed with oral surgeons, osteotomies, open and closed reductions of trauma fractures, sequestomy due to osteomyelitis and numerous extractions of impacted third molars, and placed Erich cast bars in patients needing intermaxillary fixation, all utilizing IV sedation.

1979 Public Health Service
Assignment: Bethel Medical Health Center
 Bethel, Alaska

I delivered all routine and emergency dental care to remote Eskimo villages surrounding the Bethel area and the Bering Sea.
