¹ I started with MI Technical Solutions as a software developer. Upon gaining cybersecurity certifications, security analysis was added to my job responsibilities. Due to tight schedules for installing our product onboard U.S. Navy ships, and as a San Diego resident, I was tasked with supporting shipboard installation/integration at the same time as working on the software development/security side. Shipboard integration and testing gradually became my primary function. The date of January 2014 is a rough estimate of the point in time this transition occurred.
