

VINCENT MOISO

PROFILE

Vincent has been a business owner and executive in the tile and stone industry for two and a half decades. As a business leader and educator at the executive level, his international business experience has taken him to the UK, China, Europe, Mexico, and every major market in the US. With a successful track record of business development coupled with his involvement in the industry, he has driven several businesses to double digit growth. Vincent began his career in the fabrication and installation of natural stone and related products. He has extensive experience in manufacturing and distribution of porcelain tile, natural stone, stone and quartz slabs, and glass tile products. He currently runs multiple businesses and consults for several companies in the tile and stone industry on various subjects such as strategic planning, job problem resolution, systems and processes, inventory, sales and marketing. Vincent is also a podcaster and author recently publishing *The Complete Guide on Developing Tile & Stone Specifications with Architects*, a live course that he teaches at the annual Coverings tradeshow. Most recently, Vincent became the Principal Owner of Ceramic Tile and Stone Consultants where he collaborates on various projects conducting extensive tile and stone related forensic research.

EXPERIENCE

BUSINESS CONSULTANT AT VIS BUSINESS GROUP, LLC (DBA VIS ASPIRE INC. AND CERAMIC TILE AND STONE CONSULTANTS) — 2014 - PRESENT

Through my extensive international experience in the tile and stone industry I offer a unique perspective to businesses looking to grow within this market. My expertise includes strategic planning, b2b selling and marketing, tile and stone related product development, merchandising, tile and stone related logistics, inventory and supply chain management. Maintaining deep knowledge and experience in tile and stone manufacturing and distribution, fabrication and installation, combined with a successful track record in merchandising, product development, and strategic planning, I help business owners plan for the future, retain key employees, solve for critical problems and market their products professionally. visbiz.us

VINCENT MOISO

PRESIDENT, AT OCEANSIDE GLASSTILE — JUNE 2016 - PRESENT

Oceanside Glasstile is a manufacturer of glass tile and related products. OGT incorporates porcelain and natural stone into mixed media mosaics for sale to approximately 300 large and boutique retailers and distributors across the country and internationally. As an equity partner and executive in the business, I have helped with two asset acquisitions that have created 2x top-line growth and developed some immediate additional national growth opportunities. glasstile.com

FORENSIC INVESTIGATOR | PRINCIPAL AT CERAMIC TILE AND STONE CONSULTANTS — 2014 - PRESENT

Ceramic Tile and Stone Consultants (CTASC) is a professional consulting firm that specializes in tile and stone installation problems, forensic failure investigation services, insurance claim investigation services, tile and stone quality control services, expert witness services, and market research. For over a decade I have researched hundreds of projects ranging from installation issues, to quality issues, to injury cases. I have performed on-site inspections and written investigative summary documents providing expert opinion based on research, industry knowledge, and more than two and a half decades of directly related industry experience. I have also testified several times in many different cases. ctasc.com

VICE PRESIDENT, STRATEGIC CHANNELS AT GBI TILE & STONE — OCTOBER 2013 - JUNE 2014

GBI is an international manufacturer and distributor of porcelain and ceramic tile, natural stone tile and slab and related products focused on B2B selling to over 300 large and boutique retailers. In this position I was charged with business development, finding new sales channels such as natural stone slab sales, commercial sales and dealing with large national retailers such as Daltile, Restoration Hardware, Waterworks, Ann Sacks, and others. As a shareholder of GBI, I sold my equity stake back to my partners early in 2014 and exited the company to pursue my own business venture. gbitile.com

VICE PRESIDENT, MARKETING AT GBI TILE & STONE — JANUARY 2009 - OCTOBER 2013

GBI is an international manufacturer and distributor of porcelain and ceramic tile, natural stone tile and slab and related products focused on B2B selling to over 300 large and

VINCENT MOISO

boutique retailers. In this position I was charged with business development, finding new sales channels such as natural stone slab sales, commercial sales and dealing with large national retailers such as Daltile, Restoration Hardware, Waterworks, Ann Sacks, and others. As a shareholder of GBI, I sold my equity stake back to my partners early in 2014 and exited the company to pursue my own business venture. gbitile.com

DIRECTOR OF SALES AT QUARRY COLLECTION (A GBI COMPANY) — MARCH 1999 - DECEMBER 2008

Quarry Collection is the unique wholesale division of GBI charged with selling specific lines of natural stone tile and slab and related items to regional retailers. As the director of sales I managed five outside sales representatives in charge of covering the United States. Revenue doubled during my time in this position.

MARBLE MAN TILE & STONE SHAPERS/PW STEPHENS MARBLE TILE INC — JANUARY 2002 - APRIL 2010

Served as the RMO for a fabrication firm supervising the overall operation of the business and advising on everything from shop safety, slab handling, slab installation and proper application. The original owner and founder of the business passed away in a tragic accident and I am no longer associated with the business.

SALES REPRESENTATIVE AT MARMOL EXPORT — JANUARY 1998 - FEBRUARY 1999

Marmol Export is a distributor of tile and stone products, including natural stone tiles and slabs. I created sales from zero to almost \$2M in just over a year. I developed key relationships and obtained a C-54 California State Contractor's license for ceramic tile and mosaic installation during my employment working with their sister fabrication company, Anaheim Stone Works Inc. I left to take a management position with GBI.

MARKETING PROFESSOR AT UNIVERSITY OF SAN DIEGO — AUGUST 2011 - AUGUST 2019

For almost a decade I have taught a sales and marketing course to international graduate students. This is a seminar series for MBA students from Munich, Germany. The course focuses on using content marketing for b2b strategies and has also been a live presentation at Coverings.

VINCENT MOISO

EDUCATION

- **University of San Diego** - International Relations, 1995
- **California State University, Fullerton** - Master in Business Administration, 2003

PUBLICATIONS/PRESENTATIONS

- **How to Survive the Wilderness: The Playbook for the Entrepreneur and High Performer**, Spotlight Publishing 2020
- **The Complete Guide on Developing Tile & Stone Specifications with Architects:** University of Ceramic Tile and Stone 2019
- **Editor/Creator University of Ceramic Tile and Stone:** Understanding the Basics of Ceramic Tile, Understanding the Basics of Natural Stone, Installer Tile Specialist (ITS), Installation Standards Verification, The Complete Guide on Developing Tile & Stone Specifications with Architects.
- **How to be a Professional Architectural Sales Rep to Develop Bullet Proof Specifications:** Coverings 2023, 2024, 2025 & 2026
- **Total Quality Management:** Tile Solutions Plus 2025, Next Wave FUSE Alliance
- **The Art of Specifying Natural Stone:** Natural Stone Institute (NSI), Coverings 2026
- **Sustainability of Tile:** Ceramic Tile Distributors Association (CTDA).

- **Health & Environmental Benefits of Ceramic Tile:** Ceramic Tile Distributors Association (CTDA) 2026, Coverings 2026

VINCENT MOISO

EDUCATIONAL AND ONLINE COURSES CO-CREATED/EDITED

- **Understanding the Basics of Ceramic Tile:** The Ceramic Tile course includes industry standards and sales techniques and is designed to give salespeople the tools they need in order to increase sales, give tile installers the knowledge of industry standards and how to assist clients with selecting ceramic tile, and give professional designers the knowledge on how to select and specify ceramic tile.
- **Understanding the Basics of Natural Stone:** The Natural Stone course includes industry standards and sales techniques and is designed to give salespeople the tools they need in order to increase sales, give stone installers and fabricators the knowledge of industry standards and how to assist clients with selecting natural stone, and give professional designers the knowledge on how to select and specify natural stone.
- **Tile Installer Thin-set Standards (ITS) Verification:** This course instructs installers on industry standards and proper installation methods for tile thin-set applications that apply to ceramic tile, porcelain tile, stone tile, glass tile, and other types of adhered tile materials. This course is also meaningful to architects, general contractors, sales representatives, and owners who want to be aware of the industry installation standards. The course is taught in both English and Spanish.
- **The Complete Guide on Developing Tile & Stone Specifications with Architects:** This course is taught in English and instructs architects and architectural sales representatives on how to prepare Tile and Stone MasterFormat Specifications, how to identify and target projects, how to develop relationships with architects and designers, and how to track the specification to the point of receiving the order.

TEACHING

- **Developing a Marketing Budget:** University of San Diego Ahlers International School of Business 2012-2019
- **Content Sales and Marketing for B2B Strategies:** University of San Diego Ahlers International School of Business 2011-2019

VINCENT MOISO

- **The Art and Science of Selling:** University of San Diego MBA Guest Lecturer 2025
- **Certified Continuing Education Courses:** American Institute of Architects, American Society of Interior Designers, Marble Institute of America 2009-2014, Natural Stone Institute 2022-Present, Specifying with Glass Tile, Glass Tile for Pools

CURRICULUM VITAE

B A C K G R O U N D

Donato Pompo has worked within the ceramic tile, stone, brick, and terrazzo industries for over 40 years, and is a leading forensic expert and expert witness in the ceramic tile, brick, stone and terrazzo industries. He has been certified as a Ceramic Tile Consultant (CTC) through the Ceramic Tile Institute of America (CTIOA) since 1979 and is a past chairman of the CTIOA Technical Committee. Donato is a member of the industry standard committees ANSI, ASTM, ISO, TCNA Handbook, and a member of the NTCA Methods and Standards committee. He has been a member of the Construction Specifications Institute (CSI) since 1982 and has been certified as a Construction Document Technologist (CDT) since 2000. Donato is a Council-certified Microbial Remediator (CMR). Donato worked 17 years as an importer/distributor of ceramic tile and stone, he worked in the union as an installer and currently holds a California contractor's license #1043005, he is ITS Verified through UofCTS, and worked over seven years for a manufacturer of installation products and systems for ceramic tile, glass tile, stone and terrazzo products. With a science education, an MBA, and over 40 years of tile and stone experience from installation to distribution to manufacturing, Donato is considered an expert investigator within the tile and stone industries.

P R O F E S S I O N A L E X P E R I E N C E

Ceramic Tile Installation: Worked as a Union tile installer's helper for a Union ceramic tile contractor in Los Angeles, CA in the late 1960's. Continues to perform installations of tile and stone for personal projects. Currently holds a C54 – California Tile Contractor's License #1043005. He is an ITS Verified Installer through the University of Ceramic Tile and Stone.

17 Years as a Ceramic Tile and Stone Importer/Distributor: Extensive experience consulting and assisting architects with their ceramic tile, glass tile, and stone selections and installation methods. Worked closely with ceramic tile and stone installers, as well as with the general contractors educating them and helping them design installation systems.

7 Years as a Manufacturer of Installation Systems: Over seven years working with a manufacturer of installation products and systems for ceramic, glass, stone tiles, and terrazzo. Provided technical consultation to architects and installers. Wrote installation specifications. Developed and ran training programs, investigated and resolved many job failure claims.

35+ Years of Training: Extensive experience with effective results in teaching installation methods for ceramic tile and stone to architects, installers, distributors, and manufacturers. Conducted presentations on technical information in order to prevent potential installation problems and developed and provided training resources and programs.

W O R K H I S T O R Y

How Training and “E-learning” Can Improve ROI

Floor Covering Institute Blog, May 19, 2010 <http://blog.floorcoveringinstitute.com/> On-line education is an effective, cost-efficient way to train salespeople and reduce expenses, increase your competitive edge and improve the return on investment spent on training.

Natural and Manufactured Stone Products Catalina Report CR065 July 2010

Contributing author to a 250-page statistical research report on the U.S. stone industry trends.

Stone floor construction - good data leads to intelligent decisions and market strategies;

Floor Covering Institute Blog, October 5, 2010 <http://blog.floorcoveringinstitute.com/>; You are only limited by what you don't know. Stone statistical data and trends was limited until Donato Pompo and Catalina Research collaborated and published the U.S. Stone Product reports.

Quality control - the best way to avoid ceramic and stone installation failures;

Floor Covering Institute Blog, December 10, 2010 <http://blog.floorcoveringinstitute.com/>; The best way to ensure quality installations is through a Project Quality Control Plan.

Hollow Sounding Tile May Signal Installation Problems

The Commercial Flooring Report Volume 38 June 2011 - Hollow sounding tiles in an installed tile application may or may not mean there is a problem. A tile installation can be hollow for a number of reasons and the only way for sure to determine if there is a problem is to intrusively remove tiles to evaluate the underlying conditions.

Flexible, affordable training means adapting to and using technology;

Floor Covering Institute Blog, June 29, 2011 <http://blog.floorcoveringinstitute.com/>; Quickly evolving information and products makes education more important than ever. Training used to mean taking the sale force out of the field. But these days that isn't always necessary.

[Published Articles by Donato Pompo –continued]

Top cause of failed shower installations? Installer training; Floor Covering Institute Blog, September 13, 2011 <http://blog.floorcoveringinstitute.com/>; We have learned that ceramic and stone installation failures are not usually the result of one deficiency, but rather a combination of compounding deficiencies.

Market Strategy for a Tough Economy; Floor Covering Institute Blog, November 4, 2011 <http://blog.floorcoveringinstitute.com/>; Whether you are part of the ceramic tile or stone industry, which is my specialty, or even part of the floor covering industry, the same business and marketing principals apply and you need to go through the same exercise to answer the following questions and prepare your business strategy...

Good Specs Mean Good Tile and Stone Installations* – The Construction Specifier, Volume 64, Number 12, December 2011 – Ceramic tile, natural and manufactured stone, and glass tile have rapidly evolved - it is not a simple matter to determine what, where, and with which something should be used. Consequently, it is more important than ever for the specifier to have thorough and clear quality assurance and quality control sections in their specifications.

<http://www.kenilworth.com/publications/cs/de/201112/index.html>, page 30.

- *Received The Construction Specifier Article of the Year Award for this article -

Shrinkage leads to Indent Fractures in Stone - NTCA TileLetter November 2011 - Shrinkage is not new. In fact, it's expected to occur within setting materials. What has changed is that much more stone is being installed today, over different substrates and substrate conditions.

Good-quality Specifications result in good-quality tile and stone installations – TADA, Tile for Architects, Designers and Affiliates - Volume 1, Issue 1, April 2012 – Ceramic tile, natural and manufactured stone, and glass tile have rapidly evolved - it is not a simple matter to determine what, where, and with which something should be used. Consequently, it is more important than ever for the specifier to have thorough and clear quality assurance and quality control sections in their specifications.

Intelligent merchandising in the floor covering showroom; Floor Covering Institute Blog, May 02, 2012 <http://blog.floorcoveringinstitute.com/>; In a ceramic tile and stone showroom the two biggest challenges for customers are visualizing how the tile or combination of tiles will look installed in the home and determining which tiles are suitable for their intended application. The key to solving that challenge is to train sales people so they are knowledgeable and competent showroom consultants utilizing intelligent merchandising.

Avoiding the Fall - Specifying ceramic, glass tile, stone, and terrazzo for slip Resistance – The Construction Specifier, Volume 65, Number 10, October 2012 – Slip resistance, ease of maintenance, and application type are all very important to understand when specifying ceramic tile, glass tile, stone, terrazzo, or any other hard surface material. What degree and type of traffic a tile surface will experience is important, as well as whether it is an interior, exterior, level, or sloped application that will be subjected to dry, wet, or frozen conditions. Specifying the wrong product for the intended use can be a liability to both the specifier as well as to his or her client. The solution to all of these potential challenges are to qualify the suitability of the tile and stone products for the intended application before specifying them and, if necessary, hire a consultant who can help make educated decisions. <http://www.kenilworth.com/publications/cs/de/201210/index.html>, page 60.

Writing Quality Stone Specifications – Building Stone Magazine - Fall 2012 – With stone continually being used in new and unique applications, writing quality specifications is critical to ensure a successful installation. It is not a simple matter to determine what, where, and with which something should be used. Consequently, it is more important than ever for the specifier to have thorough and clear quality assurance and quality control sections in their specifications.

[Published Articles by Donato Pompo –continued]

Specifying Natural Stone – Construction Canada, Volume 55, Number 2, March 2013 – While there may be visual similarities, few materials can replicate the actual sustainable or durable qualities of natural stone. Although there are many different types of Natural stone with different physical properties - so it is not a simple matter to determine what, where, and with which something should be used. Consequently, it is more important than ever for the Canadian specifier to have thorough and clear quality assurance and quality control sections in their stone specifications. <http://www.kenilworth.com/publications/cc/de/201303/index.html>, page 80.

Specifying Ceramic, Glass, and Stone Tiles for Exterior and Interior Wet Areas Understanding the importance of slope, weeps, and flashing – The Construction Specifier, Volume 66, Number 5, May 2013 – Exterior decks and balconies, and interior wet areas are more prone to problems due to their exposure to large volumes of water. Failures of these areas are typically due to a combination of installer error, using improper materials, and not having thorough specifications and details. The three common deficiencies found are the lack of an adequate slope-to-drain at the waterproof membrane surface, plugged drain weep holes, and the lack of adequate waterproof flashing to keep moisture from migrating into the substrate and tile or into adjacent materials causing expensive collateral damages. <http://www.kenilworth.com/publications/cs/de/201305/index.html>, page 10.

Natural and Manufactured Stone Products Catalina Report FC083 June 2013
Contributing author to a 230-page statistical research report on the U.S. stone industry trends.

Hollow-Sounding Tiles may Signal Installation Problems - NTCA TileLetter July 2013 - Hollow sounding tiles in an installed tile application may or may not mean there is a problem. A tile installation can sound hollow for a number of reasons and the only way for sure to determine if there is a problem is to intrusively remove tiles to evaluate the underlying conditions (long version) <http://ntca-tada.com/?p=855>.

Hollow-Sounding Tiles may Signal Installation Problems - NTCA TADA Online July 26, 2013 - Hollow sounding tiles in an installed tile application may or may not mean there is a problem. A tile installation can sound hollow for a number of reasons and the only way for sure to determine if there is a problem is to intrusively remove tiles to evaluate the underlying conditions (short version).

Specifying Movement Joints and Sealants for Tile and Stone - Reviewing current industry standards and design options – The Construction Specifier, Volume 66, Number 10, October 2013 – When there is a tile or stone failure, a contributing factor is often the lack of properly installed movement joints. Just like concrete sidewalks and bridges, tile and stone need to have movement joints to control the anticipated movements within a structure. Tile and stone will expand and contract when it is subjected to heat/cold or moisture/dryness. It is critical for architects to properly specify the design, materials, and layouts of movement joints. <http://www.kenilworth.com/publications/cs/de/201310/files/10.html>, page 10.

Installing ceramic tile, glass tile, and stone in interior wet areas - NTCA TileLetter January 2014 - Interior wet areas are more prone to problems due to their exposure to large volumes of water. Failures of these areas are typically due to a combination of installer error, using improper materials, and not having thorough specifications and details. The three common deficiencies found are the lack of an adequate slope-to-drain at the waterproof membrane surface, plugged drain weep holes, and the lack of adequate waterproof flashing to keep moisture from migrating into the substrate and tile or into adjacent materials causing expensive collateral damages. Why movement joints and sealants must be installed in tile and stone

installations - Current industry standards and design options - NTCA TileLetter May 2014 - Industry standards say that all tile installations must have movement joints. If you don't install movement joints, and there is some problem with the tile installation, then the fingers will be pointing your way and you will be held responsible even if the problem isn't directly related to the lack of movement joints. Lack of movement joints can be a contributing factor to many different types of tile failures, so it's not worth the risk to exclude them from your installations. Page 54.

Tile and Stone Training – Ceramic Tile, Glass Tile and Stone Training: Avoid Costly

Problems with Continued Education – Floor Covering Installer July/August 2015 - Not unlike doctors, attorneys, accountants and other professionals, tile installers must keep up with industry standards and other changes within the industry. This requires each professional to commit time each year for continued education training. <http://digital.bnpmmedia.com/publication/?i=264058&p=36>

Tile and Stone Lippage – What is acceptable (and how do you specify it)? – The

Construction Specifier August 2015 - Excessive tile lippage can be avoided with quality architectural specifications that include adequate testing and quality control processes. It is typically due to a combination of substrates not properly prepared, improper installation methods, improper use of materials, and poor installer workmanship performance. Perceived excessive tile lippage is often because of inappropriate lighting design, too narrow of grout joints, and not following industry recommendations. In some cases, where perceived excessive tile lippage is unavoidable, it may be due to false expectations by the specifier or client. <http://www.kenilworth.com/publications/cs/de/201508/> Page 44.

Tile and Stone Lippage – What is acceptable and how do you avoid excessive tile

lippage through quality tile and stone installations? Part 1 of 2 – TileLetter February 2016 - Excessive tile lippage can be avoided with quality installations. It is typically due to a combination of substrates not properly prepared, improper installation methods, improper use of materials, and poor installer workmanship performance. Perceived excessive tile lippage is often because of inappropriate lighting design, too narrow of grout joints, and not following industry recommendations. In some cases, where perceived excessive tile lippage is unavoidable, it may be due to false expectations by the specifier or client.

Tile and Stone Lippage – What is acceptable and how do you avoid excessive tile

lippage through quality tile and stone installations? Part 2 of 2 – TileLetter March 2016 - Excessive tile lippage can be avoided with quality installations. It is typically due to a combination of substrates not properly prepared, improper installation methods, improper use of materials, and poor installer workmanship performance. Perceived excessive tile lippage is often because of inappropriate lighting design, too narrow of grout joints, and not following industry recommendations. In some cases, where perceived excessive tile lippage is unavoidable, it may be due to false expectations by the specifier or client.

Why you need to learn how to install gauged porcelain tile slabs/panels –TileLetter

November 2016 – Gauged porcelain tile panels/slabs are the latest and greatest buzz in the tile industry. These tiles are 5' x 10' or larger and they range in thickness from 1/8" to 3/4". These tiles require new tools and methods for installing them. Installers need to learn how to install these tiles, which will help them differentiate themselves from their competition and allow them to get more jobs and make more money.

Specifying Tile and Stone on Concrete – How much lippage is too much? – The Construction Canada June 2016 - Excessive tile lippage can be avoided with quality architectural specifications that include adequate testing and quality control processes. It is typically due to a combination of substrates not properly prepared, improper installation methods, improper use of materials, and poor installer workmanship performance. Perceived excessive tile lippage is often because of inappropriate lighting design, too narrow of grout joints, and not following industry recommendations. In some cases, where perceived excessive tile lippage is unavoidable, it may be due to false expectations by the specifier or client. <http://www.kenilworth.com/publications/cs/de/201508/> Page 56.

Curbless Shower Design: Requirements and Options –TileLetter March 2016 – Curbless showers are not only required for the handicap and better for the aging population, but they have become popular and practical. This article reviews the proper design and installation requirements and recommendations for curbless showers, as well as reviewing the various building codes and Americans with Disability ACT (ADA) requirements.

Ensuring the Quality of Thin Brick Veneer Installations – The Construction Specifier, Volume 72, Number 4, April 2019 – Potential problems with thin brick exterior veneer applications can be avoided with good MasterFormat specifications, including adequate quality assurance (QA) testing and quality control (QC) processes. Architects and developers can hire consultants specializing in the application that is being specified to detail the installation process. Failures are typically due to a combination of improperly prepared substrates, poor installation methods and products, and wrong use of materials. It is in everyone's best interest to produce quality MasterFormat specifications with thorough QA & QC sections. <https://www.constructionspecifier.com/publications/de/201904/index.html>, page 18.

Avoiding Construction Defects – Performing Quality Control and Quality

Assurance – The Construction Specifier, Volume 76, Number 5, May 2023 – Most construction failures are due to installer error because of their lack of knowing and understanding the respective industry standards. The lack of installer supervision and quality control compounds the construction industry's shortage of qualified labor. Without the supervision and oversight the labor will continue to do things wrong thinking it is ok, which perpetuates the same mistakes and problems. Generally speaking, when there is a problem, it is not due to a single deficiency, but rather due to multiple compounding deficiencies. Poorly written architectural specifications and the lack of oversight by the general contractor can be contributing factors to failures. The solution is utilizing the quality assurance section of the Master Specification Part 1 General and specify verification of performance of materials. <https://www.constructionspecifier.com/publications/de/202305/> page 24.

Avoiding the Fall – The Importance of Slip Resistance of Floor Surfaces – FLOORED, Innovative Flooring News for Modern Business, Winter 2023 – Slip resistance, ease of maintenance, and application type are all very important to understand when specifying ceramic tile, glass tile, stone,

terrazzo, or any other hard surface material. Specifying the wrong product for the intended use can be a liability to both the specifier as well as to his or her client. The solution to all of these potential challenges is to qualify the suitability of the tile and stone products for the intended application before specifying them and, if necessary, hire a consultant who can help make educated decisions.
<https://floorcoveringinstitute.com/floored-magazine/floored-winter-2023/>, page 12.

[Published Articles by Donato Pompo –continued]

The Lack of Qualified Management is the biggest threat to tile and stone industries – TileLetter October 2024 – In the recent years all you hear is that the tile and floor covering industry has a shortage of qualified labor suggesting the problem is the installers. The fact is, it isn't the installers that are the problem, it is the management that is the problem. Tile failures are a symptom of a management problem. It is the lack of management providing supervision and oversight of the installers' work. If management provided adequate oversight, they would catch deficiencies before they became expensive problems. The problem is that most installation companies don't provide adequate oversight, which is the way you prevent problems and how you train your installers to perform the work correctly and per industry standards. They think they can't afford or be competitive in providing adequate oversight and training. The fact is, they can't afford not to...

Tile and Stone Lippage – What is acceptable (and how do you specify it)? – The Construction Specifier Updated 2025 - Excessive tile lippage can be avoided with quality architectural specifications that include adequate testing and quality control processes. It is typically due to a combination of substrates not properly prepared, improper installation methods, improper use of materials, and poor installer workmanship performance. Perceived excessive tile lippage is often because of inappropriate lighting design, too narrow of grout joints, and not following industry recommendations. In some cases, where perceived excessive tile lippage is unavoidable, it may be due to false expectations by the specifier or client. <https://www.constructionspecifier.com/tile-and-stone-lippage-what-is-acceptable-and-how-do-you-specify-it/>.
