### THE NEGLECTED ONE BILLION DOLLAR MA RECREATIONAL STRIPED BASS FISHERY

The following economic summary was compiled by Frederic B. Jennings Jr., Economist (Harvard B.A. *magna cum laude*, Stanford Ph.D.) using the most recent NOAA data available. The methodologies employed to reach these conclusions were peer reviewed and vetted by NOAA Fisheries Economists Sabrina Lovell and Scott Steinback.

- Each year the MA recreational striped bass fishery rivals our scallop fishery as our most economically valuable marine resource.<sup>1</sup>
- The MA recreational striped bass fishery is economically far more valuable than all of our other fin-fisheries combined.<sup>2</sup>
- In 2003 the total economic contribution of the MA recreational striped bass fishery to our economy was estimated to be in excess of \$1.1 billion dollars, with direct recreational expenditures in this fishery of \$650 million dollars.<sup>3</sup>
- In 2007, the direct recreational expenditures attributable to the MA recreational striped bass fishery were estimated to be about \$500 million dollars.<sup>4</sup>
- By 2016, the direct recreational expenditures in this fishery had diminished to just under \$350 million dollars in economic value in only nine years.<sup>5</sup>
- If the MA recreational striped bass fishery were brought back to as healthy a condition as it was in 2007, direct recreational expenditures would rise by 80 percent (or \$276 million) to about \$623 million dollars per year in economic value.<sup>6</sup>
- The decline in the economic value of the recreational striped bass fishery in MA directly coincides with the decline in the quality of, and consequently the participation by anglers in, the recreational wild striped bass fishery.
- The value of a wild striped bass caught recreationally (harvested or released) is worth roughly 20 times more to the economy of the Commonwealth than the same fish when harvested commercially.<sup>7</sup>
- Currently the 800,000 pounds of wild striped bass that is annually allocated for commercial harvesting is costing the Commonwealth close to \$100 million per year in unrealized economic activity in the recreational fishery.<sup>8</sup>
- Legislatively redirecting the MMFAC to manage the wild striped bass fishery for its greatest economic value to the Commonwealth would help to rebuild this fishery and increase direct recreational spending by \$250 to \$300 million dollars per year, and

<sup>&</sup>lt;sup>1</sup> See Exhibit 1 (p. 1 of 2), Exhibit 2A and 2B (FBJ Report 8/24/16 and Update), Exhibit 3 (NMFS Annual Commercial Landings in MA).

<sup>&</sup>lt;sup>2</sup> See Exhibit 1 (p. 2 of 2), Exhibit 2A and 2B (FBJ Report 8/24/16 and Update), Exhibit 3 (NMFS Annual Commercial Landings in MA).

<sup>&</sup>lt;sup>3</sup> From 2005 Southwick Report for MA (based on 2003 NOAA data), See Tables E-1, 6 and 17 on pages v, 10 and 23 (Exhibit 4).

<sup>&</sup>lt;sup>4</sup> See Exhibit 2A, Table One; the precise figure is \$495,949,291 (also appears in Exhibit 1).

<sup>&</sup>lt;sup>5</sup> See Exhibit 2B, Table One; the precise figure is \$346,368,829 (also appears in Exhibit 1).

<sup>&</sup>lt;sup>6</sup> See Exhibit 2B, Table Two; the precise figures are 79.8% and \$276,338,092 to \$622,706,919 (this figure is not shown in Exhibit 2B).

<sup>&</sup>lt;sup>7</sup> From 2005 Southwick Report for MA (based on 2003 NOAA data). See Tables E-1, 6 and 9 on pages v, 10 and 13 (Exhibit 4).

<sup>&</sup>lt;sup>8</sup> Southwick argued that wild striped bass caught recreationally were worth about \$133/pound based on recreational expenditures, while worth only \$6.00/pound in the commercial harvest (yielding an implied loss per pound of \$127/pound). Multiplying that implied loss per pound by the current MA annual commercial quota of 800,000 pounds of wild striped bass yields \$101,600,000.

restore almost <u>7000 jobs</u> in the recreational striped bass fishery that have been lost since 2007 due to commercially biased management goals and objectives.<sup>9</sup>

• Establishing a policy directive requiring the MMFAC to reprioritize their goals and to implement same will involve <u>zero cost</u> to the Commonwealth and generate around \$300 million dollars' worth of additional economic activity in this state each year. 10

Frakers Den Se

<sup>&</sup>lt;sup>9</sup> See Exhibit 2B, Table Two; the precise spending and jobs figures are \$276,338,090 and 6,908 jobs.

<sup>&</sup>lt;sup>10</sup> The additional economic activity likely to be generated by a healthy and robust recreational wild striped bass fishery is hard to assess with any precision, but the data presented in Table Two of Exhibit 2A suggest that this estimate may be quite conservative.

# COMPARISON OF MA RECREATIONAL WILD STRIPED BASS DIRECT EXPENDITURES WITH THE VALUE OF ANNUAL COMMERCIAL LANDINGS OF SEA SCALLOPS IN MA

# A REPORT ON THE ECONOMIC VALUE AND IMPACT OF THE MA RECREATIONAL WILD STRIPED BASS FISHERY

# **CONTENTS**

- 1. REPORT SUMMARY
- 2. EXPLANATION OF FBJ ANALYSIS
- 3. SPREADSHEET WITH TABLES ONE, TWO AND THREE

# REPORT SUMMARY 24 August 2016

This most recent report identifies the economic value of the *recreational* wild striped bass (WSB) fishery in Massachusetts and compares it to the economic value of the *commercial* marine fishing industry in the Commonwealth. To ensure scientific accuracy and independent credibility, an earlier version of this analysis was reviewed by two senior fisheries economists at NOAA (Drs. Scott Steinback and Sabrina Lovell), co-authors of NOAA's September 2013 Report called "The Economic Contribution of Marine Angler Expenditures in the United States, 2011." Because of their generous contributions of time, insight and experience, it was possible to make this economic analysis even more detailed and relevant to the management decisions regarding our limited and valuable marine fisheries resources. I am most grateful for their professional input and guidance on this study.

The basic conclusions of this report show that the MA recreational WSB fishery is one of the most economically valuable in the state, rivaling the MA sea scallop fishery in its spending and economic impacts on the economy of the Commonwealth.

- 1. In its annual direct spending effects, the MA recreational WSB fishery is on average worth over **130** times the value of annual commercial WSB fishery landings in MA.
- 2. In its annual direct spending, the MA recreational WSB fishery totals, on average during the ten years from 2006 to 2015, over three and a half times (or <u>361.3%</u> of) the total landed value of MA commercial landings of finfish, and almost 90 percent (or <u>88.9%</u>) of the worth of the total annual landings of the entire MA seafood industry.

- 3. The average economic impacts<sup>1</sup> on sales, income and profits ("value added") of the recreational WSB fishery are <u>88-112%</u> of those for the MA commercial finfish industry, making them approximately equal in their overall economic impact.<sup>2</sup>
- 4. The average economic impacts (in dollars) of the MA recreational WSB fishery are <u>22-26%</u> of those for the entire MA commercial seafood industry between 2006 and 2015.
- 5. Even in its currently depleted condition, the MA recreational WSB fishery rivals the MA sea scallop fishery in its economic contributions. The value of annual landings in MA of sea scallops have averaged just over <a href="https://example.com/half">half</a> (or <a href="https://example.com/half">52.2%</a> of) that of all MA seafood industry landings from 2006 to 2014, while the average annual worth of expenditures by WSB anglers is a larger percentage (<a href="https://example.com/half">88.9%</a>) of the value of all MA seafood industry landings.
- 6. Were the MA recreational WSB fishery managed for recreational abundance as a game species, rather than being commercially overexploited for a minimum value, the economic significance of this fishery in both its spending and economic impacts (based on the peak year of WSB angling trips in 2007) would increase by the following amounts (based on NOAA data): \$290 million (or 93%) in direct spending; and 150% increases in the form of 3,964 more jobs; \$428 million in more sales; \$196 million in more income; and \$289 million in more profits.

This recently completed analysis shows that the MA recreational WSB fishery, rather than being just a playground for the idle rich, is one of the most important MA marine fisheries in its economic impact. These results suggest that the MA recreational WSB fishery ought to be managed for its maximum economic contribution and value as an exclusively recreational fishery by declaring striped bass a game species in Massachusetts coastal waters. This strategic shift would allow this important fishery to be managed for better conservation and abundance, assuring us of a healthy recreational sport fishery in MA for many years to come. Massachusetts could once again become known as "the place to go" for great saltwater fishing as a worldwide tourist angling destination.

profit ("value added") impacts are from 2007-2014, due to unavailable data for the earlier years.

<sup>&</sup>lt;sup>1</sup> These impacts need to be compared separately, as they are not independent categories. Summing them up, as I did in the earlier report, involved some (unquantifiable) multiple counting due to these measurement overlaps.

<sup>2</sup> The jobs and sales impacts are for 2006 to 2014; the income impacts are measured from 2009-2014 and the

## Explanation of FBJ Analysis of the Economics of the MA Striped Bass Fishery

Frederic B. Jennings Jr., Ph.D. – 24 August 2016

The attached analysis reveals the economic importance of the MA recreational wild striped bass (WSB) fishery. The spreadsheet has three tables showing that the <u>direct annual expenditures</u> of MA recreational WSB anglers averages almost **90%** of the value of annual commercial landings for *the entire MA seafood industry!* When the <u>full economic impacts</u> of these two sectors are compared, the average annual impact of the MA recreational WSB fishery on sales, income and profits is **22-26%** of the impact of the entire MA commercial seafood industry over the last **10** years. These results show that the MA recreational WSB fishery is by far one of the most important marine fisheries in this state, perhaps rivaled only by the MA scallop fishery in its full economic impact.

<u>Table One</u> shows the annual <u>recreational catch</u> of WSB in MA from 2006 to 2015 (with the percentage loss therein relative to the peak catch in 2006). The next three lines show the same annual data for <u>recreational WSB fishing trips</u> in MA (compared to the peak in 2007). Then <u>angler expenditures per trip</u> are shown for each year by mode, based on NOAA data from 2006 to 2013 (extrapolated for subsequent years using regional Consumer Price Index [CPI] data). The number of WSB trips are then applied to expenditures per trip to derive <u>total angler expenditures</u> per year by mode on <u>WSB fishing trips</u> and related equipment for 2006 to 2015. The next set of lines shows similar data for the <u>economic impact</u> of MA recreational WSB angling on jobs, sales, income and profits, while the final set of lines in <u>Table One</u> shows the economic value and impact <u>per fish caught</u> in each year. Finally, the last three columns in the lower half of <u>Table One</u> compare the actual 2015 annual WSB recreational spending and impact (per year and per fish) to <u>what it would have been</u> in 2015 with the number of WSB angling trips taken in 2007 and in 2014.

<u>Table Two</u> then summarizes this last comparison between 2015 actual data with what it would have been with the number of WSB trips in 2007 and 2014 to show <u>implied losses in direct expenditures</u> due to declining recreational WSB catches and trips of almost <u>\$300 million</u> in the 8 years since 2007, and of over <u>\$126 million</u> in just one single year alone. The <u>annual losses in economic impact on jobs, sales, income and profits</u> due to declining WSB trips for those years are much larger. Were the 2007 trips taken in 2015, the state would have seen a 93% increase in <u>3,964 more jobs</u>, and almost a 150% increase in sales of <u>\$428 million</u>; in income of <u>\$196 million</u>; and in profits of <u>\$289 million</u>. In just a single year, since 2014, the decline in the WSB recreational fishery due to fewer WSB trips has denied us a 40% spending boost of <u>\$126 million</u>; a 65% job increase of <u>1,744 jobs</u>; and a 65% rise in sales <u>(\$189 million</u>), incomes <u>(\$87 million</u>) and profits <u>(\$127 million</u>). These shortfalls translate directly into <u>annual losses in tax revenues</u> for the MA state economy.

<u>Table Three</u> compares the size and economic importance of the MA commercial and recreational WSB fisheries thus:

- (1) In dollar value, the recreational WSB fishery spends 132 times the annual value of MA commercial WSB landings.
- (2) MA direct recreational WSB spending averages 3.6 times the average value of MA commercial finfish landings.
- (3) The recreational WSB fishery spends an average of 89% of the full value of MA commercial seafood landings.
- (4) The recreational WSB fishery is worth <u>87.6%</u> of the entire MA finfish industry in its impact on <u>sales</u>; for <u>income</u>, it is worth <u>1% more</u> than the finfish industry's impact; and its <u>profit</u> impact is <u>12% higher</u> than that for all finfish.
- (5) The <u>sales and income impact</u> of the MA recreational WSB fishery is worth <u>22%</u> of that of the entire MA seafood industry, while the MA recreational WSB fishery's <u>profit impact</u> is worth <u>26%</u> of that of the MA seafood industry.

**BOTTOM LINE:** The spending effects and full economic impacts of the *MA recreational WSB fishery* – with respect to its role in the state's economy (and thus on jobs and taxable revenues) – makes it one of our most important fisheries. With a healthy WSB fishery – managed for conservation and abundance – the economic impact of the MA recreational WSB fishery would double or more, growing to more than half the economic impact of the entire MA seafood industry.

The relative economic value and impact of the MA commercial WSB fishery is quite trivial when compared with the value of the MA recreational WSB fishery, with a negligible economic contribution to our state's economy. Making WSB a gamefish, and ending the wasteful commercial harvest of this valuable sport fish, should have a major positive impact on the MA state economy by allowing the WSB fishery to recover from its currently depleted state, with a potential economic impact of far more than \$500 million per year (as suggested in <u>Table Two</u>). We need to rethink our approach to the management of this extremely valuable fishery in the Commonwealth of Massachusetts.

Respectfully submitted,

Frederic B. Jennings Jr., Ph.D.

# EXHIBIT 4

# The Economics of Recreational and Commercial Striped Bass Fishing in Massachusetts

Summer 2005

Prepared by Southwick Associates, Inc. Fernandina Beach, Florida

E.

Stripers Forever, Inc.

## **Executive Summary**

#### **Economic Impacts:**

This report assesses the economic contributions of commercial and recreational marine striped bass fishing in the estuarine and marine waters of Massachusetts, and aquaculture's potential as a substitute for wild fish. The contents were adapted from an Atlantic coast-wide study on the same topic (*The Economics of Recreational and Commercial Striped Bass Fishing*, March, 2005). This report presents results specific to Massachusetts while the original report contained results for all the Atlantic states from Maine to North Carolina.

The mission of Stripers Forever is as follows:

"Stripers Forever advocates eliminating all commercial fishing for wild striped bass, setting aside as much of the commercial quota as necessary to create and maintain healthier fish stocks, and allocating the rest to improve personal-use fishing for recreational anglers." If the striped bass fishery were so managed, any future harvest levels would produce greater returns for coastal economies and the national economy, because as this report explains, striped bass captured by the recreational sector are far more valuable on a per pound basis than those harvested commercially.

The purpose of this report is to help readers understand the greater economic returns from recreational fishing compared to commercial harvests, even when overall harvests are reduced. This report is based on data from existing sources and includes details regarding methods, limitations and results.

Currently, given state-specific allocations of striped bass between the commercial and recreational sectors, recreational anglers harvest 4.6 times more fish, yet produce nearly 50 times more economic activity than commercial fishermen as a result (see Table E-1, page v). The commercial impacts in Table E-1 considered the value-added and additional impacts created as raw striped bass move through processors and distributors on the way to the final restaurant or retail consumer. Detailed, state-specific impacts for the recreational and commercial fisheries are presented later in this report.

Table E-1: Impacts of Recreationally Harvested Striped Bass Compared to Commercially Harvested Striped Bass in Massachusetts

	Commoraial	Decreational	Decreeties allege etc. Area
	Commercial	Recreational	Recreational Impacts Are:
Total:			
Pounds Harvested	1,055,496	4,889,036	4.6 times greater
Retail Sales (seafood retail and restaurants / angler expenditures)	\$6,156,450	\$649,742,549	105.5 times greater
Total Multiplier Effect (output, or ripple effect)	\$24,242,457	\$1,158,014,659	47.8 times greater
Jobs	524	10,986	21.0 times greater
Per Pound:			
Retail Sales	\$5.83	\$132.90	22.8 times greater
(angler expenditures; seafood retail and restaurants)			
Total Multiplier Effect (output, or ripple effect)	\$22.97	\$236.86	10.3 times greater
Jobs	.00050	.00225	4.5 times greater

The state economy will benefit by maximizing the percentage of fish caught by the recreational sector (harvested fish plus catch-and-release fishing). This is demonstrated in Table E-2, which presents the actual economic impacts from all striped bass activity in 2003, plus a hypothetical scenario based on all harvests occurring in the recreational sector.

Table E-2: Actual and Hypothetical Economic Impacts of Massachusetts Striped Bass Harvests

Current 2003 Scenario:	Commercial	Recreational	Total
Pounds Harvested	1,055,496	4,889,036	5,944,532
Retail Sales	\$6,156,450	\$649,742,549	\$655,898,999
Total Multiplier Effect	\$24,242,457	\$1,158,014,659	\$1,182,257,116
Jobs	524	10,986	11,510
If Stripers Fully Allocated to Recreation:			
Pounds Harvested	0	5,944,532	5,944,532
Retail Sales	\$0	\$850,512,997	\$850,512,997
Total Multiplier Effect	\$0	\$1,515,841,189	\$1,515,841,189
Jobs	0	14,381	14,381
Net Increase in Impacts:			
Pounds Harvested	-1,055,496	1,055,496	0
Retail Sales	-\$6,156,450	\$200,770,448	\$194,613,998
Total Multiplier Effect	-\$24,242,457	\$357,826,530	\$333,584,073
Jobs	-524	3,395	2,871

#### **Economic Values:**

A full economic examination of a fishery should include economic values, when possible. Economic values examine economic efficiency, and look at changes in consumer surplus and producer surplus. Consumer surplus is the value of a good or service beyond what the customer

Table 5: Recreational Multipliers Used in This Analysis (Impacts Per Dollar Spent)

	Retail Sales	Total Multiplier Effect (output)	Salaries and Wages	Jobs	Sales and Motor Fuel Taxes	State Income Taxes	Federal Income Taxes
Massachusetts	1	1.782266933	0.453533969	0.000016908	0.060186976	0.021231887	0.076958074
United States Source: Sport Fishi	1 ing in Am	2.746529311 erica. Values of Our	0.71905113 Traditional Pasti	0.000026232 ime. American S	0.043581188 portfishing Associa	0.007550318 tion. 2003.	0.119978368

The multiplier data were for 2001, not 2003, which is the time frame of this report. However, without updated models showing any increases or decreases in the impact effects between 2001 and 2003, adjustments were not possible. Given the nature of the general economy to evolve slowly over time, economic multipliers would generally experience small changes from year to year. The U.S. Department of Commerce, reflecting the slowly evolving nature of the economy, only updates the data used to produce its RIMS-II economic multipliers every five years. Regardless, the economy does change gradually. Therefore, the multipliers used in this report are considered closely, but not perfectly, representative to 2003. The estimated economic effects of striped bass angler expenditures on travel-related expenses and equipment sales is presented in Table 6. The effects from only travel-related expenses are presented in Table 7 and explain the importance of striped bass angling to coastal-related tourism. Appendix I presents rough estimates of the number of striped bass anglers per state.

Table 6: Estimated Economic Impacts, All Recreational Travel and Equipment Expenditures Combined

	Retail Sales	Total Multiplier Effect (output)	Salaries and Wages	Jobs	Sales and Motor Fuel Taxes	State Income Taxes	Federal Income Taxes
Massachusetts	\$649,742,549	\$1,158,014,65 9	\$294,680,317	10,986	\$39,106,039	\$13,795,26 1	\$50,002,935
Atlantic Coast, Maine to North Carolina (including Massachusetts)	\$2,412,284,99 9	\$6,625,411,45 7	\$1,734,556,25 5	63,278	\$105,130,24 5	\$18,213,52 0	\$289,422,01 7
Per lb harvested in Massachusetts:	\$132.90	\$236.86	\$60.27	0.00225	\$8.00	\$2.82	\$10.23
Per fish caught and kept in Massachusetts:	\$1,596.03	\$2,844.55	\$723.85	0.02698	\$96.06	\$33.89	\$122.83
Per trip in Massachusetts:	\$246.87	\$439.99	\$111.96	0.00417	\$14.86	\$5.24	\$19.00

## 4.0 Economic Impacts from Reallocating Striped Bass

NOTE: The mission of Stripers Forever is as follows: "Stripers Forever advocates eliminating all commercial fishing for wild striped bass, setting aside as much of the commercial quota as necessary to create and maintain healthier fish stocks, and allocating the rest to improve personal-use fishing for recreational anglers." The information presented in this section is *only* intended to demonstrate the greater economic returns produced by recreational fishing, even when fish are released, compared to commercial landings.

This section looks at the differences in retail sales, jobs and overall economic activity stimulated by recreational and commercial harvests. Recognizing that boat, tackle and other equipment dealers have been vocal about the importance of striped bass management to their livelihoods, the recreational dollars analyzed here are based on Table 4, which includes travel and equipment expenditures.

Based on NOAA landings data, and matched with the economic impact information presented on the preceding pages, the respective impacts per pound of fish *landed* (versus caught and released) are presented in Table 9. Please note that these numbers do not reflect the fish allocated by government to the commercial and recreational sectors. Instead, they reflect actual fish caught as reported by NOAA Fisheries. Overall, on a per-pound basis, the recreational sector in Massachusetts generates greater impacts for the coastal economy, with over 22 times more in retail sales value per pound landed, over 10 times more economic activity across the state economy, and 4.5 times as many jobs.

Table 9. Recreational Landings Compared to Commercial Harvests, 2003:

	Commercial	Recreational	Recreational Impacts Are:
Total:			
Pounds Harvested	1,055,496	4,889,036	4.6 times greater
Retail Sales (angler expenditures; seafood retail and restaurants)	\$6,156,450	\$649,742,549	105.5 times greater
Total Multiplier Effect (or new economic activity)	\$24,242,457	\$1,158,014,659	47.8 times greater
Jobs	524	10,986	21.0 times greater
Per Pound:			
Retail Sales	\$5.83	\$132.90	22.8 times greater
(angler expenditures; seafood retail and restaurants)			
Total Multiplier Effect (or new economic activity)	\$22.97	\$236.86	10.3 times greater
Jobs	.00050	.00225	4.5 times greater

One goal of this study is to demonstrate the greater returns to coastal economies from recreational fishing for striped bass compared to commercial harvests. The greater returns from recreational activities are demonstrated next by comparing current economic impacts of striped bass harvests to a hypothetical scenario where fishing is limited to recreational anglers only.

Table 17. Potential Recreational Impacts in Massachusetts if Stripers Were Fully Allocated to the Recreational Sector

to the Recieational Sector			
Current 2003 Scenario:	Commercial	Recreational	Total
Pounds Harvested	1,055,496	4,889,036	5,944,532
Retail Sales	\$6,156,450	649,742,549	655,898,999
Total Multiplier Effect	\$24,242,457	1,158,014,659	1,182,257,116
Jobs	524	10,986	11,510
If Stripers Fully Allocated to Recreation:			
Pounds Harvested	0	5,944,532	5,944,532
Retail Sales	\$0	\$850,512,997	\$850,512,997
Total Multiplier Effect	\$0	\$1,515,841,189	\$1,515,841,189
Jobs	0	14,381	14,381
Net Increase in Impacts:			
Pounds Harvested	-1,055,496	1,055,496	0
Retail Sales	-\$6,156,450	\$200,770,448	\$194,613,998
Total Multiplier Effect	-\$24,242,457	\$357,826,530	\$333,584,073
Jobs	-524	3,395	2,871

The two approaches, differing slightly, produce the same basic result: if all striped bass harvests had been made by recreational anglers only, the Massachusetts economy would have been increased by approximately \$334 million and have supported nearly 2,900 additional jobs. The goal of Stripers Forever is to eliminate all commercial fishing for wild striped bass and to set aside as much of the commercial quota as necessary to reduce overall mortality, increase the health of striped bass stocks, and improve recreational fishing. The arguments presented here state that the economic returns from striped bass stocks can be maximized through recreational angling, even when overall mortality is reduced.

#### Potential Striper Management Revenue:

To help offset the revenues lost from lower sales of commercial licenses, and to boost striped bass management activities, a stamp could be required for recreational anglers who wish to keep any stripers to eat. Considering the estimated number of striped bass anglers in Massachusetts, and three proposed price points for a striped bass stamp, the potential revenues that could be earned for striper management are presented below. (Please note that this table assumes all striped bass anglers would purchase a stamp, and does not exclude seniors or youth who might be exempted from purchasing a striped bass stamp).

Massachusetts Striped Bass A	548,691		
Potential Revenues from a Massachusetts Striper Stamp:
